

Requirements – WorkNest

User Roles

- The system has three types of users — Admin, Manager, and Employee
- Admin has full access to everything in the company
- Manager can only see and manage their own team, not other departments
- Employee can only see their own personal data, nothing else

Authentication

- A business owner registers their company by filling in basic company info
- They then invite employees by entering their email — the employee gets a link to set their password
- Each user logs in with email and password and gets sent to their own dashboard based on their role
- If a user forgets their password, they can reset it through a link sent to their email
- The system automatically logs users out after a period of inactivity for security

Employee Management

- Admins can add new employees, edit their information, or deactivate them when they leave
- Each employee profile stores their name, contact details, job role, department, and start date
- Contract documents can be uploaded as PDF files and viewed anytime from the profile
- The system tracks contract end dates and sends an automatic alert to the admin 30 days before a contract expires so renewals are never missed

Attendance Tracking

- Managers can manually mark each employee's attendance every day as present, absent, late, or half day
- Alternatively, employees can check themselves in by scanning a QR code when they arrive and scanning again when they leave — the system logs the exact time automatically
- Each employee has a monthly attendance calendar showing a clear visual of all their working days
- At the end of the month the admin can export the full attendance report as a PDF or Excel file to use for payroll

Leave Management

- Employees submit leave requests directly through the app by selecting the type of leave, start date, end date, and an optional note explaining the reason
- The manager receives a notification immediately and can approve or reject the request with a single click
- Each employee has a leave balance tracker showing how many days they have left for each leave type
- There is a shared team calendar where managers can see who is off and when, making it easy to plan workload
- The system supports multiple leave types including vacation, sick leave, personal leave, and unpaid leave

Salary & Payroll

- Each employee has a base salary stored in the system from the moment they are added
- At the end of the month the admin can add any bonuses or deductions manually for that specific employee
- The system automatically calculates the net salary based on the base salary, attendance record, bonuses, and deductions
- Once the admin reviews and confirms the payroll, the system generates a PDF payslip for each employee
- Employees get notified that their payslip is ready and can view or download it directly from their dashboard

Announcements

- Admins and managers can write and post announcements directly through the system instead of sending WhatsApp messages
- They can choose to send the announcement to all staff or target a specific department only
- All targeted employees receive a notification and the announcement appears on their dashboard homepage
- This ensures important information reaches everyone at the same time in an organized way

Dashboards

- The admin dashboard gives a full company overview — total employees, who is present today, how many are on leave, pending requests, and contracts expiring soon

- The manager dashboard focuses on their team only — today's attendance, pending leave requests, and an upcoming schedule view
- The employee dashboard is personal — it shows their attendance this month, remaining leave balance, their latest payslip, and any active announcements

Notifications

- When an employee submits a leave request the manager gets notified immediately
- When the manager approves or rejects the request the employee gets notified with the decision
- When a contract is 30 days from expiring the admin gets an alert so they can act in time
- When the monthly payslip is generated the employee gets notified that it is ready to view
- When a new announcement is posted all relevant employees get a notification so nothing is missed

System Rules

- Every company that registers on WorkNest has a completely separate and isolated space — no company can ever see another company's data
- Every page and every action in the system checks the user's role before allowing access — a manager cannot access admin features and an employee cannot access manager features
- The entire system is designed to work perfectly on a mobile phone browser without needing to download any app, which is important for employees who will mostly use it on their phones
